Dahua Wireless Multi IO Transmitter

Series Overview

The Wireless Multi IO Transmitter allows for seamless connectivity with the Alarm Hub through wireless radio frequency. It serves as a bridge connecting the Alarm Hub to the existing wired detector and siren, so that triggered alarms are sent to the Alarm Hub from the wired detector, and the alarm hub then sends commands to the siren. This enables you to easily incorporate your old wired detectors and sirens into the new wireless alarm system, which significantly reduces the cost of modifications.
